

Aero App for iOS v1.2007

1. Version Highlights:

Enhancements

- **Moving Map:**
 - **New ADS-B Products & Transparency:** Aero App enables pilots to overlay new ADS-B weather overlays and change transparency.
 - **Point Shapes:** Pilots can add point shapes (triangles, squares, or circles) to the points in their route.
 - **Arresting Gear:** Aero App enables pilots to overlay worldwide Arresting Gear locations on the Moving Map. Tapping on an Arresting Gear icon displays a pop-up with relevant information.
 - **Contextual Help:** Pilots can view Contextual Help that provides concise feature information. Views that provide Contextual Help display an orange ⓘ symbol in the top-right corner of that view.
 - **PDF Search:** Pilots can search key terms on the body text of any PDF file within Aero App. The searched term will be highlighted in the current document.
 - **Ownship Icon:** Pilots can select their preferred ownship icon to display on the Moving Map. Pilots can select from P-3 (B737), Boeing C-17, A-10 Warthog, and many more.
 - **AirDrop:** Aero App can share AirDrop-compatible files such as maps, cycles, and additional files with another iPad.
 - **Route Line Transparency:** Aero App allows pilots to adjust their current route line transparency.

2. System requirements:

- iOS 12.0 or higher
- 16 GB of available storage minimum (for the installation of Aero App and one complete data cycle)
